CMP® (Compliance Management Process)

A simple yet powerful tool to enhance your existing compliance management system.

Mostardi Platt's CMP® is an EHS Compliance Management tool designed to generate and monitor a comprehensive task schedule to meet the unique needs of each individual client. It sets forth a plan to determine EHS regulations applicable to a given client's site, generate a compliance task list, assign the responsible party for each task, and monitor the performance of those tasks.

"The CMP® that Mostardi Platt introduced has provided a significant resource for our compliance program. In addition to the easy to use features such as the compliance calendar, email alerts, and tracking deadlines, we use it routinely as a reference for reports, permits, and other records that support our program. It has become a quick reference for all of our compliance documentation."

Terry Emmel
Vice President, Facility Operations

"Mostardi Platt's CMP® has greatly improved our compliance track record over the years and has ensured that we do not receive any regulatory violations or fines."

Tim J. Zernzach
Global Director
